

Thank you for your purchase...

You have just purchased the finest Hanging Float Racks® available in today's market. All of our float products are manufactured with Furniture Grade PVC pipe & fittings. By using 100% PVC Furniture Grade material *throughout*, ensures that our pipe will never scratch, peel, chip or flake off.

Furniture Grade PVC is superior for use due to its ultraviolet stability, impact resistance and high gloss finish. This is the same material used in manufacturing high-end medical equipment, such as wheelchairs, gurneys, walkers, etc., as well as many outdoor uses in towel racks, patio furniture, patio tables, etc. It is low maintenance and lightweight making it easy to assemble and install in your desired location.

We thank you for your recent purchase. Happy floating!

What's in the box...

- Installation Guide
- 1 Vertical stand
- 6 "Arms"
- 5 Phillip screws
- 1 short mounting bracket
- 1 long mounting bracket
- 1 End Cap

Tools required for installation...

- Phillips Screwdriver
- Be sure to use the appropriate mounting fasteners, (not included), for your installation surface.
- We highly recommend using washers for each mounting fastener you choose.

Check our website for additional Hanging Float Rack® devices, accessories, floats and other pool toys...

INSTALLATION GUIDE Hanging Float Rack® 6 Float Model

WARNING: Our Hanging Float Rack® products are designed to hold a maximum of ten pounds per "arm" which is the approximate weight of a swimming pool float. Our Hanging Float Rack™ products are NOT toys and are not intended for children to pull or swing on the arms.

Installation steps...

1. Determine where you want to mount your float storage rack. Remember the bottom "arm" should be at least 75" from the ground to accommodate the most popular floats of 73" height. (The top bracket should be approximately 8 feet from the ground).
2. LET'S ASSEMBLE THE RACK...
3. Screw one of the provided screws to the lower position of the vertical stand. DO NOT OVERTIGHTEN. (See Photo).
4. Slide one of the "arms" on to the vertical stand.
5. Now slide the 2nd "arm" through the vertical stand.
6. Next, slide the longer of the two mounting brackets through the vertical stand. It is important you assemble in this exact order or your floats will not hang properly. This is the bottom of the rack.

7. Make sure the tabs on the mounting brackets are positioned as illustrated below. This applies to **BOTH** the lower and upper brackets.

Installation steps cont'd...

8. Insert the second screw in the pre-drilled hole right above the long bracket and then the third screw in the pre-drilled hole above, (approximately in the middle of the vertical stand). (Notice the photo below now has three screws).
9. Slide the 3rd and 4th "arms" over the vertical stand
10. Screw the fourth screw in the pre-drilled hole just above the second "arm".
11. Slide the remaining mounting bracket over the vertical stand.
12. Slide the 5th and 6th "arms" over the vertical stand.
13. Screw the fifth screw just above the third arm.
14. Insert Cap in the top of the vertical stand. The Cap will normally secure itself to the vertical stand. If it doesn't, use a small amount of PVC Cement, (not provided), to secure. Always be sure to apply glue to the "female" end of pipe. Be sure to wipe off any excess cement immediately.
15. Fasten the mounting brackets using the appropriate hardware for the surface you are mounting to, i.e.: wood screws, molly bolts, brick/cement fasteners, etc. (these are not provided).
16. Do not over tighten mounting bracket screws.
17. You are now ready to store your floats.

Installation steps cont'd...

18. Hang the first float on the top "arm", either right or left side, then the second float on the opposite top arm. Continue to alternate hanging floats on the right then left side until all floats are hung. These racks were designed for your floats to be hung in this order to ensure proper hanging and to avoid strain on the mounting brackets.
19. If you purchased the optional "Accessory Bag", it should be hung over either of the bottom "arms".

Arms can be folded to one side when all floats are in use.
